

1. What went well in this tools mastery project? What aspects of the project were interesting or fun?

- Learning how to solder has always been in my bucket list. It was a fun experience.
- During setting up my code, it worked well with minimal debugging. This really saved me time to work on other parts of the project.

2. What could you improve on if you went through this tools mastery project again?

- I would re-do the soldering setup to make it more cleaner and professional.
- I would try out more LEDs.
